1 Licensing of the Toolbox.....4

1 Licensing of the Toolbox

When the CaymanToolbox is installed, the licence supplied is automatically activated. If the program is started with a time-limited demo licence, the remaining test period is displayed. Furthermore, the dialogue window informs about the program version, the licensee and the number of licenses purchased.

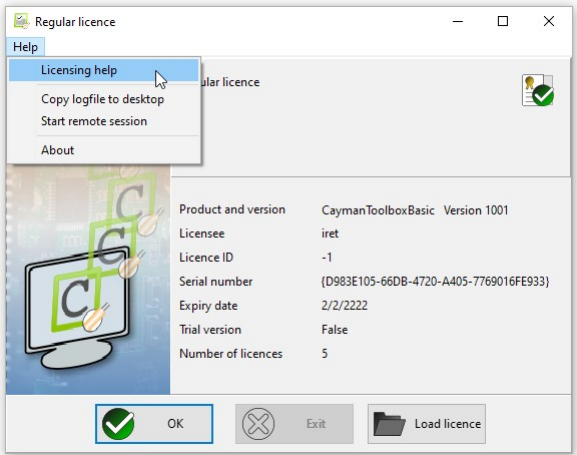

Function	Description
Button: OK	Continue with loaded licence.
Button Exit	Terminate the program.
Button: Load licence	Opens a dialog for loading a licence

If you have purchased a full version of the program, you can activate it here: Press the "Load licence" button and load the purchased licence file from the file system, e.g. from the USB stick supplied.

Note: The dialog window for loading a new licence can also be opened from the running program at any time.

If no valid licence is found when the program is started, the dialog for loading a licence is also displayed.

The 'Help' menu provides further assistance:

Menu item	Description
Licensing help	Shows this document
Copy logfile to desktop	Details of the program run are stored in the logfile. With this menu item the logfile is copied to the PC desktop. There it is easy to find and can be sent by email for maintenance purposes, for example.
Remote help	Starts a session with the AnyDesk remote maintenance software
About	Shows information about the program name, version, license, service contact

If the program is delivered with a hardware license (dongle), this must be plugged into a free USB port of the PC. If the dongle is missing, an error message appears. In this case, please exit the program ("Exit" button), plug the supplied dongle into a USB port and restart the program.
